

## Chem – Pro

The **Chem-Pro™** system is part of the family of safety-oriented colour-coded piping systems that conform with the requirements of standards relating to content identification of pipes, conduits and ducts, including AS1345 (1995).

- Compatible with wide range of Acids, Alkalis and Slurries
- Lightweight
- Range 1/2" - 4" N.B.
- High impact resistance
- Superior U.V. resistance
- Wide operating temperature
- All materials are Re-usable, Re-locatable and Re-cycleable

Like all the other members of the Pro-Pipe family, **Chem-Pro™** can be easily cut around to reconfigure production lines for changing needs or to add capacity. This ability to easily construct and reconstruct pipeline systems - or even to move entire reticulation systems from one place to another - saves considerable time, labour and expense.
